

# Clickmeter to Rebrandly Links migrations

## V. 1.1 - updated on March the 2nd

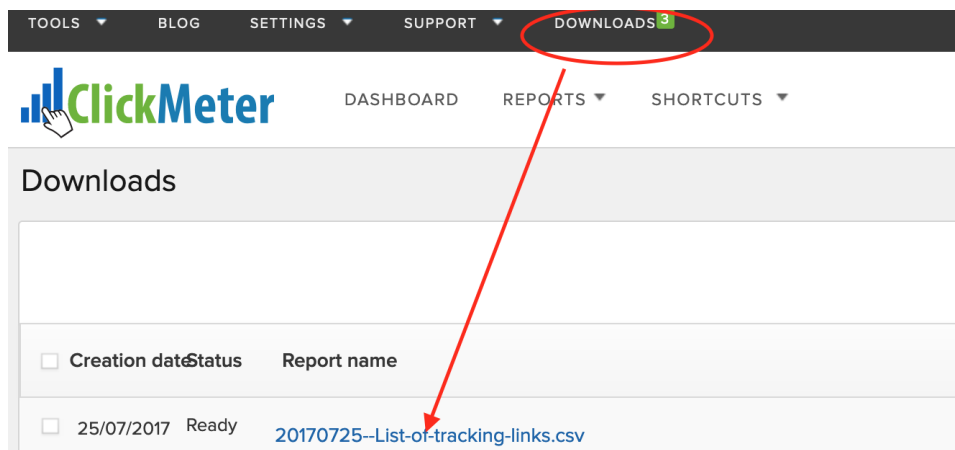

**Note:** this is only applicable to a branded domain (your own) and will not apply to the ClickMeter system domains

**Strictly follow instructions to import links from ClickMeter to Rebrandly.**

1. Export links from Clickmeter: Login to your Clickmeter account.
2. Navigate to the list of tracking links
3. Click on the **“Export the report”** button as shown below

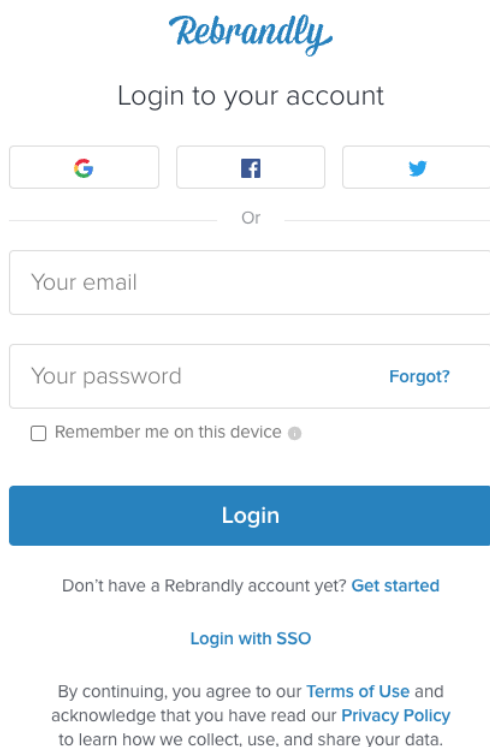

4. Once the export report is ready, download it from the **download** section, as shown below.

5. Convert the exported file as per Rebrandly import template as given here: <https://support.rebrandly.com/hc/en-us/articles/360011401694-Bulk-Link-Import-CSV-Template>

6. Make sure you have a subscription on Rebrandly (even a Free one up to one domain), if not please sign up here: <https://www.rebrandly.com/pricing#everyone>
7. Setup the domain on Rebrandly dashboard by following the instructions given below:
  - a. Log in to Rebrandly <https://oauth.rebrandly.com/Account/Login>

The image shows the Rebrandly login page. At the top is the Rebrandly logo in a blue script font. Below it is the text "Login to your account". There are three social login buttons: Google, Facebook, and Twitter. Below these is a horizontal line with the word "Or" in the center. Underneath is a text input field for "Your email". Below that is a text input field for "Your password" with a "Forgot?" link to its right. Below the password field is a checkbox labeled "Remember me on this device" with a radio button. At the bottom of the form is a large blue button labeled "Login". Below the button is the text "Don't have a Rebrandly account yet? [Get started](#)". Below that is a link "Login with SSO". At the very bottom is a small paragraph: "By continuing, you agree to our [Terms of Use](#) and acknowledge that you have read our [Privacy Policy](#) to learn how we collect, use, and share your data."

- b. Go to this page: <https://app.rebrandly.com/domains/setup-dns>  
(Domains > New Domains button > Setup DNS)
- c. Write your main domain name as the domain name field (e.g. mydomainname.com)

### Connect a domain name you already own

Configure a domain name you already own to use as a **branded domain** for your links. Please note that this is a technical procedure and DNS experience is recommended. As an alternative, [register a new domain](#).

What is your domain name

Next

#### d. Specify that you own a spare domain.

Is mydomainname.com a spare domain name?

A domain is "spare" when it is not associated with a website, a blog or anything else.

Yes, this is a spare domain.

👍 Super! You'll be able to use this domain to create branded links

No, it's being used for my website, blog, etc...

Next

- When all steps above have been completed, please send a request to the Rebrandly Support Team (<https://support.rebrandly.com/hc/en-us/requests/new>) to grant the importing of the links on your RB account (Important: specify the domain name and that you are migrating from ClickMeter)
- Wait for a confirm from the Support Team
- Start the import on Rebrandly (refer to the article below):  
<https://support.rebrandly.com/hc/en-us/articles/360011661753-How-to-Import-Links-in-Bulk>
- Once the import is completed, then change the DNS settings from Clickmeter to Rebrandly.

- a. For the **Main Domain** you need to Create an A-record and leave the host name field empty and point it to 52.72.49.79.
- b. For the **Sub Domain** you need to Create an A-record and enter the sub domain name (**like go or click etc**) in the host name field and point it to 52.72.49.79.
- c. **Note:** DNS need to update, this can require up to 24 hours

**DNS not yet verified**  
 Propagation can take up to 24 hours, we'll email you once it's complete. Please ensure you've entered the correct A records. [Learn more](#)

**DNS Configuration**  
 (Expert only)

**Faster redirect**

Branded links created with this domain name will redirect much faster but it will not be possible to use geo-targeting or get click stats by country. [Learn more](#)

**Mandatory**

Apply the following DNS configuration to turn any domain into your own link shortener. All you have to do is "point" your **A Records** to Rebrandly, and make sure that all pre-existing records of type **A** or **AAAA** for **mydomainnametest2.com** are removed

Record type	Hostname (or name)	Points to (or address)
A	Leave empty or @ or ""	52.72.49.79 

**Optional (Recommended)**

We recommend the following configuration, in addition, that enables you to use variations of your branded domain to create links through Rebrandly dashboard. (e.g. www.yourbrand.com) Where possible, its better to configure the asterisk (\*).

Record type	Hostname (or name)	Points to (or address)
A	www or *	52.72.49.79 

- d. This will complete the link migration from Clickmeter to Rebrandly.

Open a ticket on Rebrandly support for further assistance: <https://support.rebrandly.com/hc/en-us/requests/new>

**Note** - There is a downside of this procedure. That is the stats will not be imported into Rebrandly. Therefore it is recommended to keep the Clickmeter Export file with you as an archive for viewing your stats. Rebrandly will start the tracking from scratch.
